

# Create A Backsplash

1. Lay two panels with female couplers facing each other. Spread panels apart about 1/2 inch as shown at right.

2. Lock together two more panels and insert them into the two base panels as shown below.

3. Install the two side panels as shown. Add a rubber band or O-rings in corners for stability. (see inset)

Run the electrical cord through the back where you created the 1/2" space in the base.
