

Pyros Wetting Solution Concentrate

Pyros Wetting Solution is a powerful wetting agent that helps water flow over glass, plastic and rubber surfaces. It burns out cleanly leaving no residue. Use with Freeze 'N' Fuse™ to avoid bubbles when filling plastic or rubber molds. Also great as a wetting agent with traditional stained glass paints and enamels.

CAUTION: Causes eye irritation. In case of eye contact, flush eyes with water for at least 15 minutes and seek medical attention. Prolonged skin contact may cause irritation. Avoid eye contact and prolonged skin contact. Keep out of reach of children.

To use with Freeze 'N' Fuse™:

For best results, use with distilled or deionized water. Use 8 to 12 drops of concentrate per cup of water. If you use tap water, you might need to use a little more, especially if your water is very hard. If excessive foaming occurs, use a bit less. This will make a basic wetting solution. Fill a bowl with the wetting solution. Sprinkle powdered glass into the solution, allowing it to settle to the bottom of the bowl. Stir gently, allow glass to settle for a minute, then pour off excess solution.

To use with enamels and stainer paints:

Use only with water-based media. Use one to four drops per cup of mixing water. For airbrush techniques, use one drop per cup of mixed paint.
