

Creative Images™ Resin Jewelry Kit

Welcome to the wonderful world of epoxy resin jewelry. In this kit you will find everything you need to complete 4 necklace and earring sets. Use the easy to follow instructions below to obtain stunning results.

Step by Step Instructions:

1. Pour equal parts of resin and hardener into mixing cup (2 drams of each will be plenty for included mold and first pour). Measuring parts are extremely important. If you have too much of one or the other, resin will not harden properly.
2. Mix resin and hardener together thoroughly. You will see air bubbles in the mixture but they will go away as the resin hardens.
3. Pour resin into mold, filling cavities half way. It is important not to completely fill mold. You will need the remaining space for future steps.
4. Allow resin to harden in mold. This typically takes 15-20 hours.
5. Select your image (some favorite ideas are cherished photographs, collaged art images, postcards, designs from clip art and more) and trim to size. Once resin has hardened in mold place your images in mold facing up. Mix equal parts of resin and hardener into mixing cup (1 dram should be sufficient).
6. Once second layer of resin has been poured carefully push down on images in mold with stir stick to remove any air bubbles from underneath.
7. Allow resin to harden completely, 24 hours, before removing from mold.
8. Remove pieces from mold. With top of pieces facing up, begin drilling holes in pieces 1/16" – 1/8" from edge. Having holes too far into piece will make adding jump rings difficult, too close to edge will not leave enough resin for a durable piece. Twist drill clockwise and counter-clockwise until you have completely passed through resin.
** It's important that drill is perpendicular to piece when drilling and not on an angle.*
9. Open jump rings by twisting left and right. Do not open jump rings by pulling straight apart; this will weaken the ring. Slide jump ring through hole drilled in piece and close.
** Earrings: You will need to add a second jump ring to piece before adding ear wires. This will ensure that your earrings are hanging correctly.*
** Necklace: Place necklace into jump ring before closing.*
