

Project Guide

A Ring of Posies

Glass Cutting: **Nipping**

Firing: **Full Fuse, Slump**

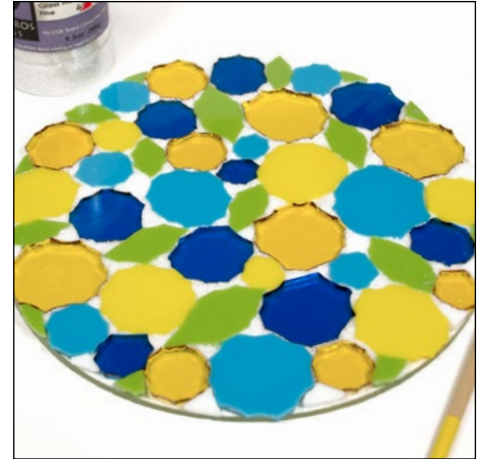

This bright, fun piece is made using a pair of glass nippers and a simple stacking technique!

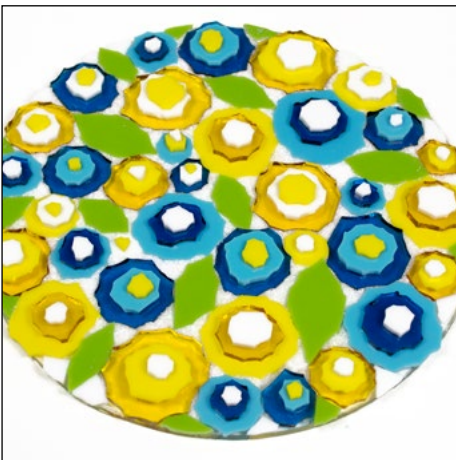

1. Begin with an 8-inch Clear circle and a color palette that has both Opal and Transparent versions of each color, plus a Green Opal and White Opal.

2. Nip rough circles in varying sizes from your "posy" colors, plus Green leaf shapes and lay them next to one another (puzzle-like) until the whole Base is covered. Be sure to extend the design all the way to the outer edge, using little triangular pieces to fill in between the circles around the rim as needed. Affix all pieces to the Base with pinpoints of glue.

3. Once the Base is covered, sprinkle Fine Clear Frit into the gaps between pieces. This insures a solid 2-layer (stable) design. Use a brush to sweep off the extra Frit.

4. Now build up each circle with gradually smaller circles. Alternate the Opal and Transparent versions of colors and use lots of White to make the design visually "pop." Full Fuse and Slump as desired. We used an 8-inch Rim Plate mold.

Firing Schedule We Used

Seg.	Ramp (°F per Hour)	Goal Temp (° F)	Hold Time (Minutes)
1	250	250	20
2	250	1050	30
3	150	1150	30
4	250	1370	20
5	300	1465	15
6	9999	950	60
7	150	800	10
8	300	100	0

Materials We Used

Glass: 8-inch Clear circle, Yellow Transparent, Deep Aqua Transparent, White Opal, Sunflower Opal, Turquoise Blue Opal, Amazon Green Opal

Frit: Clear (Fine)

Variation

The version above was made almost the same way as the main project except that intentional gaps were left between the largest circles in Step 2. These were filled with Coarse Moss Green Frit in Step 3. The piece was slumped using a Round Wave/Ruffle mold.
